Biomedical Engineering Program & Mechanical Engineering Department, University of South Carolina (USC), Columbia, SC, USA; Tel: (803) 777-8013; Email: guirenwang@sc.edu

EDUCATION

Stanford University	Postdoc,	Mechanical Engineering	12/00 – 02/02
Technical University of Berlin/Ger.	Ph.D.,	Physical Engineering	11/91- 01/99
East China Univ. of Sci. and Tech.	M.Sc.,	Chemical Engineering	09/85 - 09/88
Northwest University, Xian/China	B.Sc.,	Chemical Engineering	02/79 - 01/83

Strong background in **multidisciplinary fields** of lab-on-a-chip based on nano/microfluidics, far field, **two tunable femto-lasers based optical nanoscopic system** for in situ, 3D nanoscale measurement, super resolution cellular imaging of live cell and nanofabrication, cancer and clinical diagnostics, detection of chemical/biological agents, biomedical devices, fluid dynamics, microfluidic turbulence, mixing and etc.

- Has extensive experience in developing multifunctional far-field, two tunable femto-lasers based optical nanoscopic system to overcome diffraction limit. The system is based Stimulated Emission Depletion (STED). The aim of developing this STED based integrated nanoscopic system, is to provide not only a new far field, 3D and in situ measuring technology for fundamental understanding of the transport phenomena in meso- and nanoscale, enhance development of new nanofluidics based device, but also in situ 3D super resolution bioimaging for live cell under controlled microenvironment, and visible light nanophotolithography for 3D fast nanofabrication at a low cost.
- Has recently, for the first time, developed a novel velocimeter, i.e. Laser Induced Fluorescence Photobleaching Anemometer (LIFPA). LIFPA has ultra high temporal and spatial resolution that enables flow velocity measurement in nanochannels for nanofluidic and microfluidic technology. Instead of conventional micro/nanoparticles tracer, LIFPA uses neutral molecular tracer and STED nanoscopy to overcome diffraction limit and issues with particle tracer in PIV to achieve nanoscale resolution and fast random signal. This work could not only provide a new tool for fundamental understanding of the transport phenomena in nanoscale, but also enhance development of new nanofluidics based device.
- Has developed a novel microfluidic technology based on dielectrophoresis to be able to, for the first time (to my knowledge), separate different types of cancer cells, and cancer cells from normal epithelial cells for cancer research and diagnostics. The device can be used for other biomedical applications as well.
- Has recently discovered a new receptivity phenomenon for fast turbulent mixing. This work could lead new technology for mixing process, mixer and bioreactor, and extend our understanding of turbulence, a long-term unsolved problem in physics. The method enables us for the first time (to the best of our knowledge) to achieve turbulence in microfluidics with Reynolds number in the order of only unity. With LIFPA (the only method so far that can measure turbulence signal in microfluidics), we have even observed Kolmogorov $-5/3$ spectrum and other scaling phenomena of small scale structures of turbulence in this flow.

AWARD

- Young Investigator Award, College of Engineering & Computing, USC 2012
- Rising star, USC 2011

- NSF CAREER award 2010
- Promising Investigator Research Award, USC 2010
- North American Mixing Forum Startup Grant Award, NAMF/AIChE 2009
- Industrial Fellowship from Material and Manufacturing Ontario, Canada. 1999

WORK EXPERIENCES

- 08/12-present Associate Professor, Biomedical Engineering Program and affiliated in Mechanical Engineering Department, **University of South Carolina (USC)**, Columbia, SC, USA
- 08/07-08/12 Assistant Professor, Biomedical Engineering Program and affiliated in Mechanical Engineering Department, **University of South Carolina (USC)**, Columbia, SC, USA
- 11/05-11/06 Adjunct Professor, Chemical Engineering Department, **University of Alabama**, Huntsville, USA.
- 2/03-07/07 Principal research engineer, Biomedical Tech. Branch, **CFD Research Corp**, Huntsville, AL
- 3/02-1/03 Senior Engineer, **Amphora Discovery Corporation (a biotech company for drug discovery)**, Mountain View/CA.
- 12/00 – 2/02 Postdoctoral Fellow, Mechanical Engineering Department, **Stanford University**
- 12/99 – 11/00 Manager, **Grace Fluids Engineering**, Mississauga, ON. Canada
- 02/99–11/99 Research Scientist, R&D group, **M&I Air Systems Engineering**, Mississauga, ON. Ca.
- 12/91 – 01/99 Research Assistant, Hermann-Foettinger-Institute
Technical University of Berlin, Germany
- 4/83 - 8/85 Lecturer (Quasi), Dept. of Petrol. Chem. Eng.
- 10/88 - 5/90 **Liaoning University of Petrol. & Chem. Tech.** China
- 9/85 – 9/88 Research Assistant, Chem. Eng. Dept. **East China University of Science and Technology**, China

PAST AND CURRENT RESEARCH PROJECTS

- South Carolina EPSCoR/IDeA Office 07/01/13-06/31/14
Title: Multifunctional Far-Field Nanoscopic Imaging for Biofabrication in Tissue Engineering
Role: Principal Investigator
Duration: 1 year
- NSF 09/01/13-08/31/16
Title: Collaborative Research: Deciphering Induced-Charge Electrokinetics: Multiscale Simulations and Nanoscale Flow Characterization

Role: **Principal Investigator**

Duration: 3 year

- South Carolina EPSCoR/IDeA Program 07/01/11-06/30/12
Title: Development of a Multifunctional Far-Field Nanoscopic System with Microfluidics for Biofabrication in Tissue Engineering
Role: **Principal Investigator**
Duration: 1 year
- **CAREER/NSF** 05/15/10-04/14/15
Title: CAREER: Studying Flow Velocity Distribution in Nanofluidics with a New Far-Field Nanoscopic Velocimetry
Role: **Principal Investigator**
Duration: 5 years
- **Major Research Instrument (MRI)/NSF** 01/15/11-01/14/14
Title: Development of a multifunctional far-field nanoscopic measurement system for multidisciplinary research
Role: **Principal Investigator**
Duration: 3 years
Co-PI: Dr. Qian Wang (Chemistry, USC), Drs. K. Reifsnider, J. Khan (Mechanical Engineering, USC)
- Colon Cancer Research Center, USC (Seed fund, Centers of Biomedical Research Excellence (COBRE)) 07/19/10-07/18/11
Title: Integrated Nano- and Microfluidic Chip for Diagnosis of Early Colorectal Cancer
Role: **Principal Investigator**
Duration: 1 year
- Magellan Scholar/USC 01/01/10-12/31/10
Title: Isolation of Adult Mesenchymal Stem Cells from Peripheral Blood through Dielectrophoresis Separation
Role: **Principal Investigator**
Duration: 1 year
Co-PI: Nicholas Metrokos
- LDRD/ Savannah River National Laboratory (SRNL) 09/15/10-09/14/11
Title: Chemical and Biological Sensors based on Nanofluidic Preconcentration and Separation
Role: **Co-PI**
Duration: 1 year
PI: Dr. Poh-Sang , Co-PI: Dr. Adrián E. Méndez Torres (SRNL)
- INBRE/NIH 07/01/10-06/31/15
Title: Nano- and Microfluidics Technology for Early Detection of Colorectal Cancers
Role: **Target faculty**
Duration: 5 years
PI: Dr. Lucia Pirisi-Creek (USC)
- Magellan Scholar/University of South Carolina 01/01/10-12/31/10
Title: Microfluidics Technology for Early Detection of Colorectal Cancers

Role: **Principal Investigator**

Duration: 1 year

- Promising Investigator Research Award, USC 04/10-07/11
Title: Study Electrophoresis in a Nanochannel Using Novel Far-Field Nanoscopic Velocimetry
Role: **Principal Investigator**
Duration: 15 month
- North American Mixing Forum startup grant 01/01/10-12/31/11
Title: A novel rapid mixing process and mixer in continuous operation
Role: **Principal Investigator**
Duration: 2 years
- DARPA/(SBIR): W31P4Q-07-C-0035 12/06-06/07
Title: Novel Nanofluidics-Based Sensor System
Amount: \$100,000 (This proposal received phase II after I left the company)
Role: **Principal Investigator**
Duration: 0.5 year
- NIH/SBIR: 1R43NS050011-01 9/04 – 09/05
Title: A Novel Micro Thrombectomy Catheter for Ischemic Stroke
Amount: \$171,318
Role: **Principal Investigator**
Duration: 1 year
- OSD(DoD)/SBIR: W81XWH06C0067 12/05 – 01/06
Title: Novel Miniaturized, Electrothermal Activated, Optically Controlled, High throughput Noninvasive Drug Infusion Pump
Amount: \$100,000
Role: **Principal Investigator**
Duration: 0.5 year
- HSARPA (SBIR): 06/05–12/06 04/06–03/08
Title: A Novel Electrokinetics-Driven, Integrated Microfluidic Cartridge for Sample Preparation from Complex Matrices
Amount: \$825,000
Role: Co-Inv
Duration: 2.5 years
- MCSC/(SBIR): 11/02 – 09/03 01/04–01/06
Title: A Novel, Microfabricated, Electro-Immuno, Integrated Sensor-Sampler for Bioagent Collection and Detection
Amount: \$825,000
Role: Co-Inv
Duration: 2.5 years
- DHS S&T/HSARPA: 04/04 – 10/04
Title: A Novel Low Power, High Throughput, High Efficiency, Scalable Electrostatic Bioaerosol Sampler
Amount: \$75,000

Role: Co-Inv
Duration: 2 years

- NASA/SBIR: NNJ04JC07C 01/04 – 07/04
Title: A novel microfluidic device for fully automated extraction of RNA from cell cultures
Amount: \$450,000
Role: Co-Investigator
Duration: 2.5 years
- NIH/SBIR 2RH HL64500-02A1/03 09/02–10/05
Title: Development of Improved Pediatric Spacer for Inhalers
Amount: \$750,000
Role: Co-Investigator
Duration: 2 years

ACADEMIC AREAS OF INTEREST AND RESEARCH METHODS

- Nanoscopy: multifunctional far-field, two tunable femto-lasers based nanoscopic measurement system for interdisciplinary research in nanotechnology including
 - BioNEMS/MEMS, Lab-on-a-Chip
 - Bioimaging: 3-D super-resolution cellular imaging of live cell, STED, multiphoton
 - Fast 3D Nanofabrication using visible light nanophotolithography at a low cost
 - Nanofluidics and near wall flow: study transport phenomena in nanochannel and near wall flow using our recently developed far-field nanoscopic velocimeter
 - Single cell assay: study single cell signal transduction with far-field nanoscopy (e.g. STED) and nano/microfluidics in an integrated system
 - Single molecular detection
- Clinical diagnostics: Early cancer diagnostics using lab-on-a-chip technology and far field, two tunable femto-lasers based STED nanoscopy, point of care and personal medicine
- Nano/Microfluidics: components and integration for separation of DNA, protein and cells, detection of chemical, biological and radiating agents against terrorist attack and for environmental and food monitoring using lab-on-a-chip technology and etc
- Fluid dynamics and biofluids: microfluidic turbulence, turbulence, mixing, electrokinetics, flow control and applications of fluid mechanics in biotransport phenomena.

REVIEW PANELS

- Served on NSF proposal review panels 2008, 2009a, 2009b, 2010, 2011, 2014
- Served on NIH proposal review panels 2007, 2009

REVIEWER FOR JOURNALS

- AIChE Journal
- Analytical Chemistry
- Biomedical Microdevices
- Biomicrofluidics
- Cancers
- Electrophoresis
- IEEE Transactions on Biomedical Engineering
- Industrial & Engineering Chemistry Research
- Instrumentation Science & Technology
- International journal of heat and mass transfer
- Journal of Colloid and Interface Science
- Journal of Microelectromechanical Systems
- Lab-on-a-Chip
- Measurement Science and Technology
- Microfluidics and nanofluidics
- Nanotechnology
- Optics letter
- Sensor and Actuator B, Chemical
- Superlattice and microstructures

CONFERENCE SERVICE

- Annual meeting of American Institute of Chemical Engineers, 2012. Served as Session chair of Nanoscale Electrokinetics
- 3rd ASME Micro/Nanoscale Heat & Mass Transfer International Conference. Session chair of Visualization and measurement
- Annual meeting of American Institute of Chemical Engineers, 2011. Served as
 - Session chair of Microfluidics Detection
 - Session co-chair of Turbulent flows
 - Session co-chair of Multiphase mixing
- 63rd Annual Meeting of the Am. Phys Soc, Division of Fluid Dynamics Annual meeting, 2010. Session chair of MK Biofluids Cellular II.
- 2nd ASME Micro/Nanoscale Heat & Mass Transfer International Conference (MNHMT09), Shanghai, P. R. China, December 18-21, 2009. Session chair of Lab on a chip

INVITED PRESENTATION

- Wang, GR; F. Yang; W. Zhao. Electrokinetically driven turbulent mixing in microfluidics with low Reynolds number. 2nd International Conference on Small Science (ICSS), December 16-19, Walt Disney World Swan and Dolphin, Orlando FL, USA. 2012
- Wang, GR. et al. Dielectrophoresis (DEP) in a Microfluidics Platform to Study Isolation and Enrichment of Cancer Cells. 6th World Circulating Tumor Cell, November 13th -15th, 2012 in Boston, USA.
- Wang, GR. et al. Dielectrophoresis (DEP) in a Microfluidics Platform to Study Isolation and Enrichment of Cancer Cell. 2nd Annual Circulating Tumor Cells: Expediting Clinical Use. Feb. 21-23, 2012, San Francisco, CA.

MEMBERSHIP

- North American Mixing Forum (NAMF)
- American Institute of Chemical Engineers (AIChE)
- American electroplaters society, since 2010
- American Physical Society (APS), since 2007
- American Chemical Society (ACS), 2009
- Association of Laboratory Automation (ALA), 2003
- Founder of Chinese Life Science Association in Huntsville, 2006-2007

TEACHING COURSES

- BMEN 260 Biomechanics
- BMEN 589W/EMCH 562 Micro/nanofluidics and Lab-on-a-Chip
- BMEN 589W/EMCH 567 Bio Nano/Micro Electro-Mechanical Systems (BioNEMS/MEMS)
- BMEN 720 Transport Phenomena in Biomedical System
- EMCH 767 Micro Electro-Mechanical Systems (MEMS)

Education activities

- Supervised three postdoctoral fellows
- Supervised two PhD students, one graduated; also co-supervised one PhD student (graduated)
- Supervised four MS students and co-supervised one with Dr. J. Khan (Two graduated from Mech. Eng, one from Biomed. Eng.)
- Supervised multiple undergraduate students for Biomedical Engineering. Some received awards in USC.
- Undergraduate committee member of Biomedical Engineering Program, USC.
