GRADUATE DEGREES IN NUCLEAR ENGINEERING

A new graduate engineering program at USC opens new opportunities to enter or advance in nuclear engineering specialties. The Nuclear Engineering program offered by USC’s Mechanical Engineering Department is now enrolling graduate students for the fall 2003 semester. This flexible program makes it highly accessible for interested students regardless of their locations or schedules. For non-campus students, course materials in video streamed format will be available through broadband Internet at the participant’s convenience. Or, if they prefer, participants may request videotapes. Individual courses are also available to non-degree students seeking professional development upgrades. For more information on courses and registration, visit our web page at http://www.me.sc.edu/announcements.html#NE or call Dr Elwyn Roberts, 803 777 2252.
